(54) Title: DEVICE FOR THE PRODUCTION OF COMB HONEY

Frame Half A

(57) Abstract: A device for the collection and packaging of comb honey comprises a frame structured to fit within a honey collection section of a beehive, such as a beehive super. The frame has a plurality of cavities for collecting the honey. The frame has separation structures between the cavities to facilitate separation of the cavities from the frame. In another embodiment, the frame has opposing sides and a plurality of outwardly facing cavities in each of the sides for collecting the honey. In another embodiment, the frame comprises first and second frame halves on opposing sides of the frame. Each of the frame halves includes a backside that is enclosed by the frame to keep bees away from the backside.
